EXAMINER

COLBERT, ELLA

ART UNIT PAPER NUMBER

3624

DATE MAILED: 03/11/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.

09/201,749

Applicant(s)

ONG, PING-WEN

Examiner

Ella Colbert

Art Unit

3624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 19 December 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

1. Claims 1-28 are pending in this communication filed 12/19/03 entered as Appeal Brief, paper no. 25.
2. The Notice of Appeal file 10/17/03 has been entered as paper no. 24.
3. In view of the Appellants' arguments in the Appeal Brief filed 12/19/03, the finality of the Office Action of 08/14/03 is hereby withdrawn in view of new ground(s) of rejection as set forth here below.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Freeman et al (US 6,006,227), hereafter Freeman in view of (US 6,125,371) Bohannon et al, hereafter Bohannon in view of (US 5,991,802) Allard et al, hereafter Allard.

With respect to claim 1, Freeman teaches a method for providing an electronic document (col. 2, lines 19-25), said electronic document having multiple versions (col. 15, lines 44-45), each of said versions identified by a creation time-stamp indicating a creation time of said corresponding version (the document is identified by a time indication; col. 4, lines 42- 45, said method comprising the steps of: receiving a request for the electronic document, the request including a requested time-stamp indicating a time associated with a desired version of the electronic document (col. 3, lines 61-67

Art Unit: 3624

and col. 4, lines 18-22). Freeman failed to teach, identifying as a function of the creation time-stamp and the requested timestamp a machine storing a version of the electronic document having a creation time corresponding to the requested time-stamp and transmitting the electronic document corresponding to the requested time-stamp from the identified machine.

Bohannon teaches, identifying as a function of the creation time-stamp and the requested timestamp a machine storing a version of the electronic document having a creation time corresponding to the requested time-stamp (col. 5, lines 35-47) and transmitting the electronic document corresponding to the requested time-stamp from the identified machine (col. 4, lines 64-67 and col. 5, lines 1-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the identifying as a function of the creation time-stamp and the requested timestamp a machine storing a version of the electronic document having a creation time corresponding to the requested time-stamp and to transmit the electronic document corresponding to the requested time-stamp from the identified machine and to modify in Freeman because such a modification would allow Freeman to have the capability to identify versions of electronic documents.

With respect to claim 2, Freeman teaches, an address identifying the document includes the creation time-stamp (receiving from a user one or more values indicative of one or more selected segments of the streams corresponding to selected intervals of time; col. 3, lines 25-30).

Art Unit: 3624

With respect to claim 3, Freeman teaches, the address is a Uniform Resource Locator ("URL") (Web address; col. 13, lines 35-45).

With respect to claim 4, Freeman and Bohannon failed to teach, the Uniform Resource Locator ("URL") has an associated request header for indicating said requested time stamp. Allard teaches, the Uniform Resource Locator ("URL") has an associated request header for indicating said requested time stamp (a request header; col. 1, lines 50-60). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the Uniform Resource Locator ("URL") have an associated request header for indicating said requested time stamp and to modify in Freeman because such a modification would allow Freeman to have the capability to allow the client to pass additional information about the request.

With respect to claim 5, Freeman teaches, transmitting the version of said electronic document with the most recent creation time-stamp preceding the requested time-stamp if a version of the electronic document does not exist with the requested time-stamp (setting the time to the future or past is to reset the time-cursor temporary to a fixed position designated by the user; col. 7, lines 50-67).

With respect to claim 6, Freeman teaches, the request is specified using a browser (copying a Web address from a Web browser; col. 13, lines 35-45).

With respect to claim 7, Freeman teaches, the requested time-stamp is a relative time-stamp (chronological indicators including past, present, and future times; col. 13, lines 30-35).

With respect to claim 8, Freeman failed to teach, a memory and a processor.

Art Unit: 3624

Bohannon teaches, a memory (col. 1, lines 31-44) and a processor (col. 1, lines 51-60).

Independent claim 8 is also rejected for the similar rationale given for claim 1.

With respect to claim 9 this dependent claim is rejected for the similar rationale given for claim 2.

With respect to claim 10 this dependent claim is rejected for the similar rationale given for claim 3.

With respect claim 11 this dependent claim is rejected for the similar rationale given for claim 4.

With respect to claim 12 this dependent claim is rejected for the similar rationale given for claim 6.

With respect to claim 13 this dependent claim is rejected for the similar rationale given for claim 5.

With respect to claim 14 this dependent claim is rejected for the similar rationale given for claim 7.

With respect to claim 15, Freeman fails to teach, a computer readable medium having computer readable program code means, the computer readable program code means comprising program code means. Bohannon teaches, a computer readable medium having computer readable program code means, the computer readable program code means comprising program code means (col. 4, line 47-66). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a computer readable medium having computer readable program code

Art Unit: 3624

means, the computer readable program code means comprising program code means and to modify in Freeman because such a modification would allow Freeman to have the capability to store the code for use in a computer system for inclusion in a computer program having executable code.

This independent claim is also rejected for the similar rationale given for claim 1.

With respect to claim 16, Freeman teaches, receiving a request for the electronic document associated with the domain name, the electronic document having multiple versions, each of the versions being identified by a creation time-stamp indicating a creation time of the corresponding version, the request including a requested time-stamp indicating a time associated with a desired version of the electronic document in col. 3, lines 61-67 and col. 4, lines 18-22). Freeman failed to teach, identifying as a function of said creation time-stamp and the requested time-stamp, a machine corresponding to a version of the domain name for a time period corresponding to said requested time-stamp and transmitting an indication of the identified machine storing the electronic document corresponding to said requested time-stamp. Bohannon teaches, identifying as a function of the creation time-stamp and the requested timestamp a machine storing a version of the electronic document having a creation time corresponding to the requested time-stamp (col. 5, lines 35-47) and transmitting the electronic document corresponding to the requested time-stamp from the identified machine (col. 4, lines 64-67 and col. 5, lines 1-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the identifying as a function of the creation time-stamp and the requested timestamp a machine storing

Art Unit: 3624

a version of the electronic document having a creation time corresponding to the requested time-stamp and to transmit the electronic document corresponding to the requested time-stamp from the identified machine and to modify in Freeman because such a modification would allow Freeman to have the capability to identify versions of electronic documents.

With respect to claim 17 this dependent claim is rejected for the similar rationale given for claim 2.

With respect to claim 18 this dependent claim is rejected for the similar rationale given for claim 3

With respect claim 19 this dependent claim is rejected for the similar rationale given for claim 4.

With respect to claim 20 this dependent claim is rejected for the similar rationale given for claim 6.

With respect to claim 21 this dependent claim is rejected for the similar rationale given for claim 7.

With respect to claim 22, Freeman fails to teach, a memory for storing a database identifying a machine storing an electronic document corresponding to said domain name for a plurality of time periods; a processor operatively coupled to said memory configured to receive a request for an electronic document associated with the domain name, said electronic document having multiple versions, each of said versions being identified by a creation time-stamp indicating a creation time of the corresponding version, the request including a requested time-stamp indicating a time associated with

Art Unit: 3624

a desired version of the electronic document. Bohannon teaches, a memory for storing a database (col. 1, lines 45-60) identifying a machine storing an electronic document corresponding to said domain name for a plurality of time periods (col. 2, lines 63-67 and col. 3, lines 1-6); a processor operatively coupled to said memory (col. 1, lines 51-60) configured to receive a request for an electronic document associated with the domain name (col. 5, lines 35-47), said electronic document having multiple versions, each of said versions being identified by a creation time-stamp indicating a creation time of the corresponding version, the request including a requested time-stamp indicating a time associated with a desired version of the electronic document (col. 4, lines 64-67 and col. 5, lines 1-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the identifying as a function of the creation time-stamp and the requested timestamp a machine storing a version of the electronic document having a creation time corresponding to the requested time-stamp and to transmit the electronic document corresponding to the requested time-stamp from the identified machine and to modify in Freeman because such a modification would allow Freeman to have the capability to identify versions of electronic documents.

Freeman teaches, access the database as a function of said creation time-stamp and the requested time-stamp to identify a machine corresponding to a version of said domain name for a time period corresponding to said requested time-stamp (col. 4, lines 42-45) and transmit an indication of the identified machine storing electronic document corresponding to the requested time-stamp (col. 3, lines 62-67, col. 4, lines 1-47 and col. 6, lines 8-17).

Art Unit: 3624

With respect to claim 23 this dependent claim is rejected for the similar rationale given for claim 2.

With respect to claim 24 this dependent claim is rejected for the similar rationale given for claim 3.

With respect to claim 25 this dependent claim is rejected for the similar rationale given for claim 4.

With respect to claim 26 this dependent claim is rejected for the similar rationale given for claim 6.

With respect to claim 27 this dependent claim is rejected for the similar rationale given for claim 7.

With respect to claim 28 this independent claim is rejected for the similar rationale given for claim 15.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gilmour et al (US 6,154,783) disclosed an electronic document and database.

### ***Inquiries***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ella Colbert whose telephone number is 703-308-7064. The examiner can normally be reached on Monday-Thursday from 6:30 am -5:00 pm.

Art Unit: 3624

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent Millin can be reached on 703-308-1038. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
